Re: Application for Production Engineering Specialist – Project Coordinator

Dear Hiring Manager,

I am writing to express my interest in the Production Engineering Specialist – Project Coordinator position at ABB in Germany. With a background in mechanical engineering and experience supporting industrial operations and international tunnelling projects, I am motivated to contribute to ABB's production and engineering environment while continuing to grow within a global industrial organization.

In my recent role as Project Engineer at Herrenknecht Tunnelling Services, I supported the coordination and monitoring of mechanical and industrial equipment across international projects. My work involved technical inspections, performance analysis, and collaboration with multidisciplinary teams to improve equipment reliability and operational efficiency. Through this experience, I developed a strong understanding of industrial systems, field operations, and the importance of structured project coordination in complex environments.

I am particularly interested in roles that combine engineering and coordination, where I can contribute to operational performance and project execution within production environments. Additionally, I have exposure to continuous improvement practices and I am currently expanding my knowledge of SAP systems to strengthen my capabilities in industrial operations.

I am highly motivated to develop my career in Germany and contribute to ABB's engineering excellence. I am comfortable working in English and I am actively improving my German language skills to better integrate into the local working environment. I am available for relocation and eager to contribute with a hands-on and resilient approach.

Sincerely,

Yerman Merel
Mechanical Engineer & Systems Engineer
